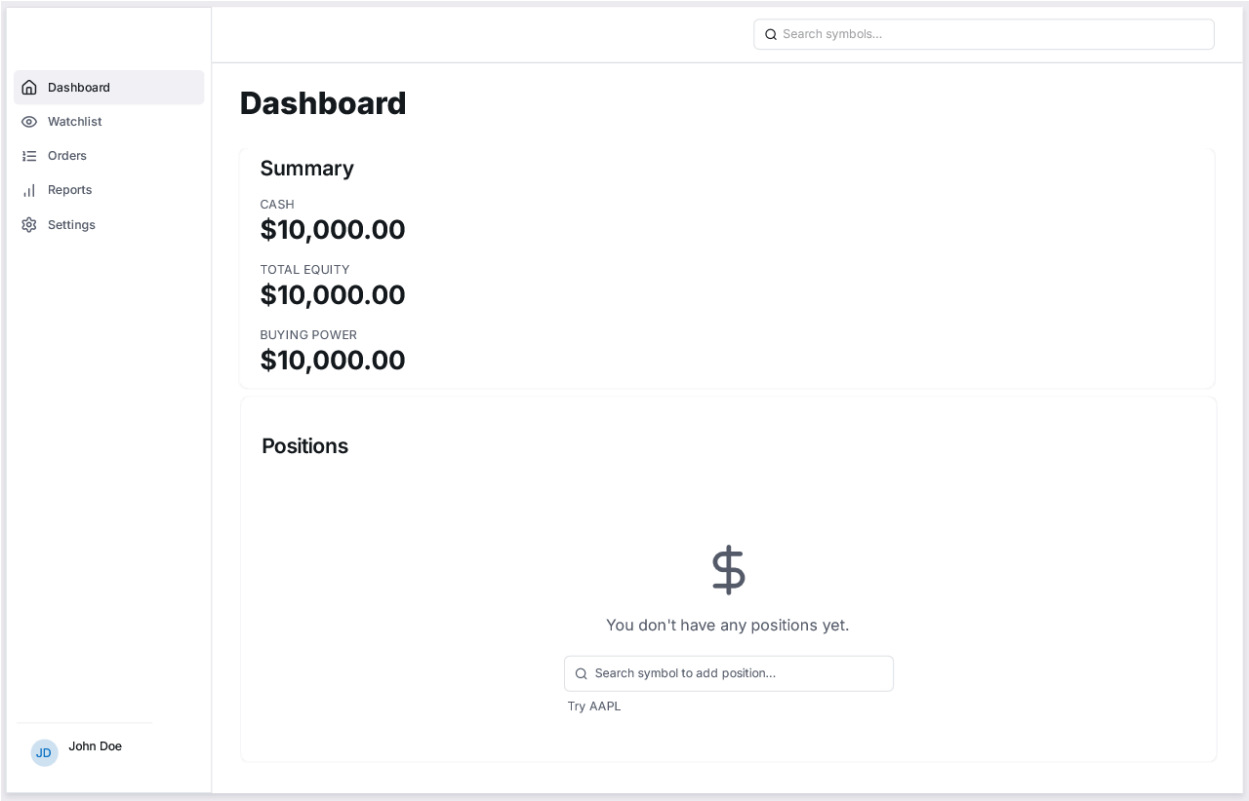
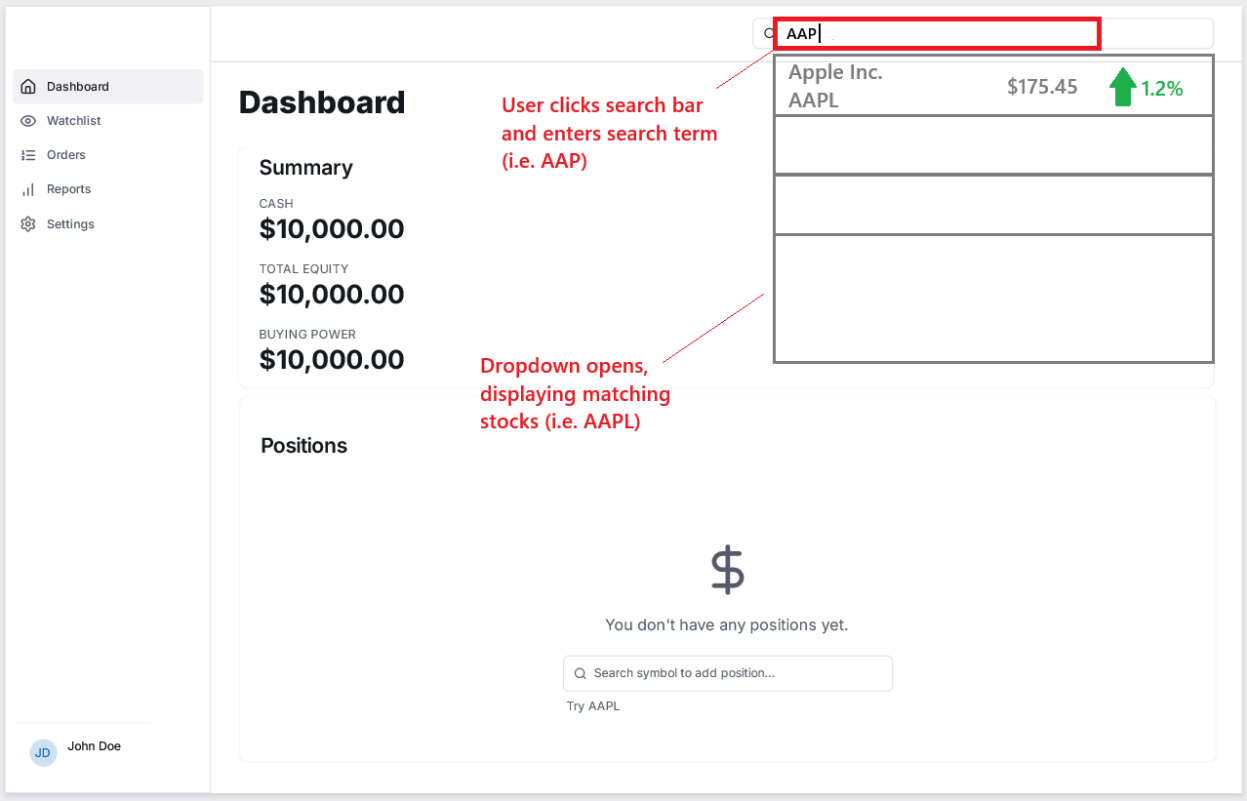
Initial landing page: User Dashboard



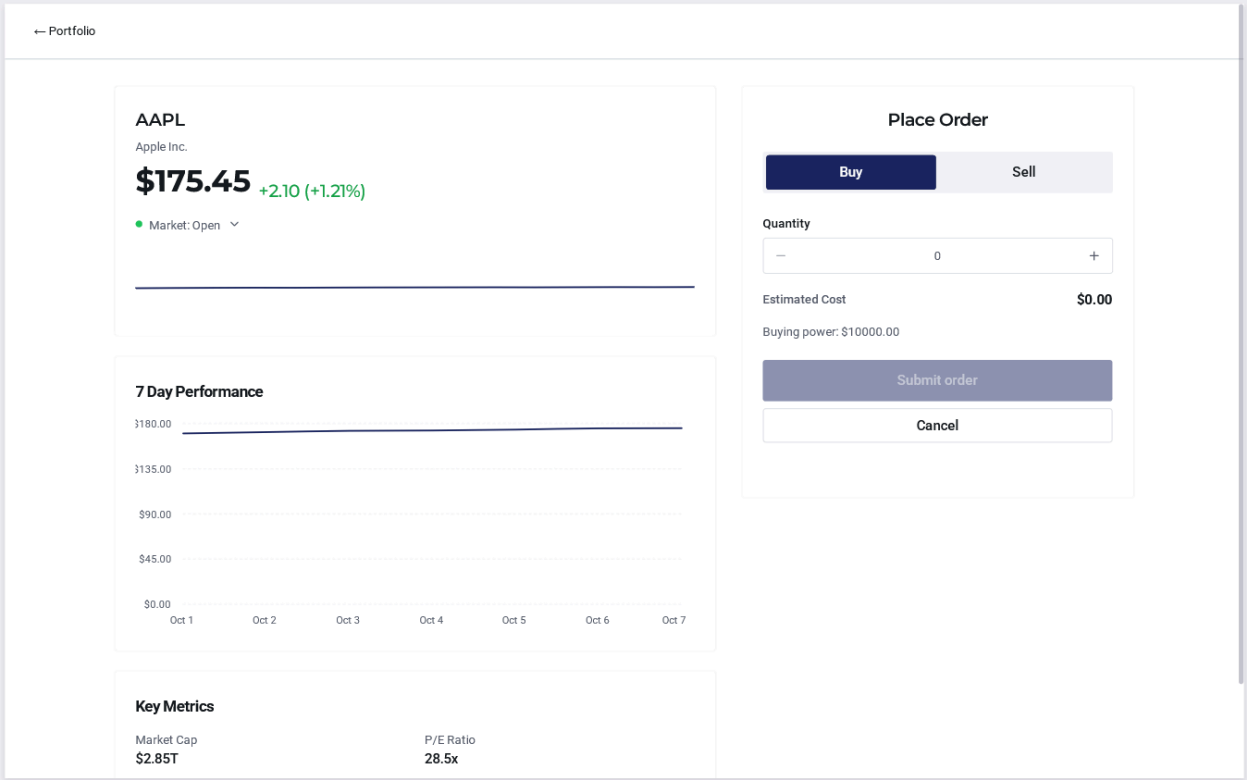
- Page seen by new users
- User can see current balance, stocks held (initially empty)
- Since user initially has no positions, they are prompted to search

User uses search bar to find a stock

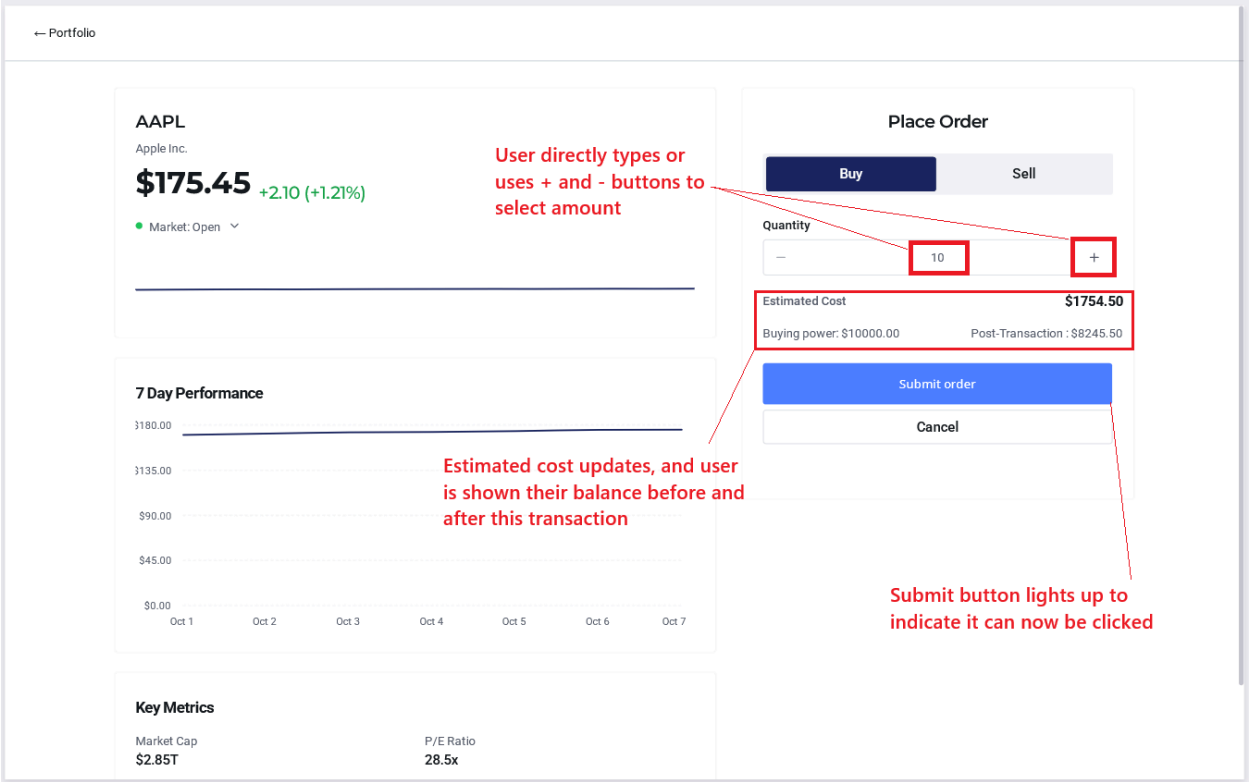


- User focuses the Search (symbol or company) field and types “AAP”
- The suggestions dropdown appears with Apple Inc. - AAPL
- On selecting AAPL, the app navigates to Symbol Details / Trade Ticket (AAPL) to place a buy/sell order

Users land on this page after selecting “Apple Inc. - AAPL” from the search results

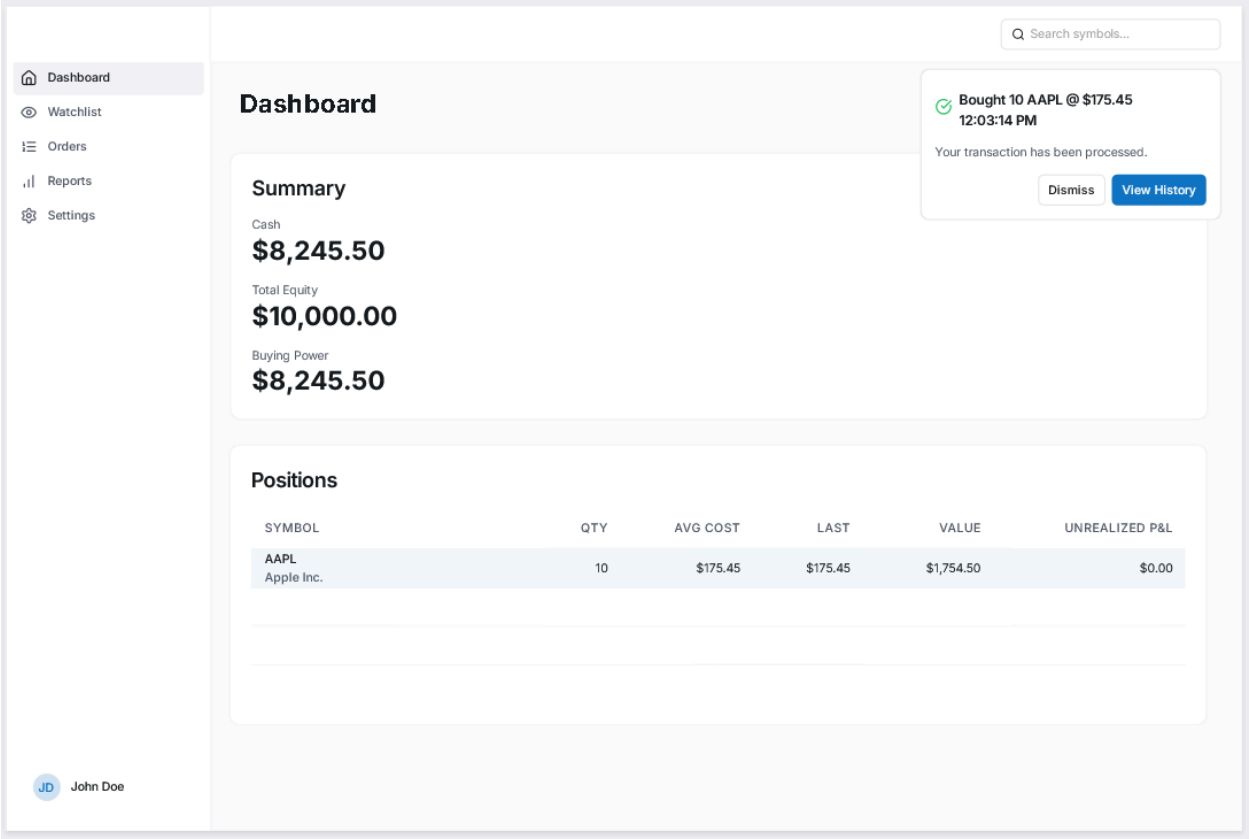


User enters amount to buy and buys stock



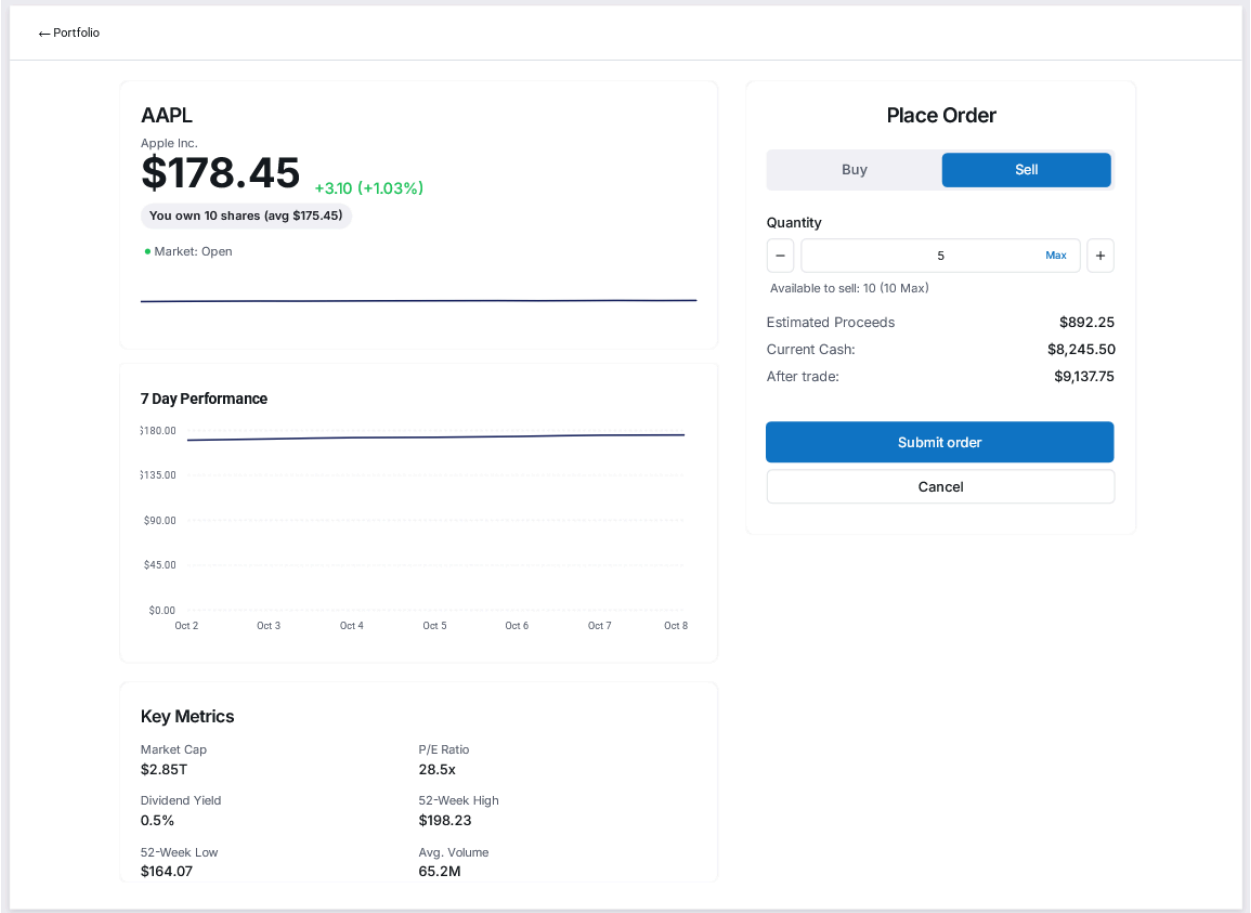
- User enters “10” directly or clicks + button 10 times to select amount
- Total cost is calculated and displayed
- Text that originally displayed current cash balance now additionally shows balance if user commits to this transaction
- Submit button changes color to indicate it is now clickable (whenever quantity > 0)

Portfolio is Updated



- After clicking submit order, it is fulfilled at current price and the user is automatically redirected to their dashboard
- User is sent a toast confirming the completion of their transaction
- Dashboard is updated to show user's new purchase

User Clicks a stock in their portfolio



- User clicks AAPL stock from their portfolio after purchase, and is directed back to the stock screen, but on the sell tab
- User is able to select amount up to max owned, and choose to sell
- Below the current price, the user is reminded of the avg. price they bought at
- Sell screen shows estimated proceeds, current cash, and estimate cash after selling at current price
- If user sells, they will get a toast similar to when buying and be redirected back to dashboard which is now updated with the amount sold removed and with the proceeds added to their balance
